new products **WAVE PRO ELITE**

Move your patients, and your practice, in the right direction with the WAVE Pro Elite, the next generation of vibration exercise technology from WAVE Whole-Body Advanced Vibration Therapy. The WAVE Pro Elite was created by a group of chiropractors and physiotherapists to help their patients achieve the therapeutic results of vibration-assisted exercise – but with less stress and friction on joints, ligaments and tendons than with existing vibration devices. WAVE's Vertical Controlled Vibration – smooth, high-frequency vibrations – eliminates the lateral “shake, rattle and roll” of alternative machines, maximizing vertical directional control for smooth vibration. Patented Air Wave Technology automatically adjusts vibration forces to each patient's weight, size and fitness level – from fragile geriatric to performance athlete – allowing the clinician to provide an exercise solution to a larger population base.

Other product features include: Exercise protocols in mobilization, strength, and massage, resulting in over 250 combinations allowing unlimited customized options; large exercise surface area, providing flexibility and stability in performing an unlimited number of exercise positions, touch screen virtual trainer, designed to visually aid the exercise routine by allowing patients to view the exercise through a 360 degree view.

Other features include:

- Ergonomic handles
- Solid steel construction
- Remote start/stop
- No assembly required
- Anti slip and cushioning surface

Achieve an hour of therapy in 15 minutes with patented WAVE technology. Find out how to help your by putting the unique advantage of WAVE to work for you.

THE NEUROINFINITI – NEUROPHYSIOLOGY FOR YOUR OFFICE

The NeuroInfiniti by Chiropractic Equity Offices (CEO) is the absolute state-of-the-art instrument for measuring neurophysiology and includes: EEG, Para-spinal SEMG, dynamic SEMG, specific SEMG, hand temperature, skin conductance (GSR), BVP, respiration belt and heart rate variability sensors.

At the core of this equipment is the Stress Response Evaluation – a complete neurological stress test which is completely computer-driven. The NeuroInfiniti instrument analyzes the state of the nervous system at seven different levels, individually or in combination. It is able to do this live or in time-comparison mode, giving the chiropractor information regarding the state of his patient's nervous system, in formats and resolution that have never been possible before.

Packages range from \$15,795 through \$19,895 and come complete with a weekend training seminar and interpretation consultations.

The NeuroInfiniti meets all FDA, ISO, and CE requirements and is the fourth generation of this instrumentation. Software and clinical support are offered through CEO, and comes with a 12 month warranty that can be extended up to three years. The program was developed by a Canadian, Dr. Richard Barwell DC, a graduate of Canadian Memorial Chiropractic College. The hardware is manufactured in Montreal by Thought Technology.
