3-DIRECTIONAL SHAKE, RATTLE AND ROLL

MOVE YOUR PATIENTS AND YOUR PRACTICE IN THE RIGHT DIRECTION.

WAVE is unique. It was created by a physical therapist and a chiropractor to help their patients achieve the therapeutic results of vibration-assisted exercise – but with less stress and friction on joints, ligaments and tendons than with existing vibration devices.

They set out to refine the best technology on the market by eliminating its lateral “shake, rattle and roll.” They also made its smooth *air cushion* action *self-calibrating*, adjusting to each patient’s weight, size and fitness level – from fragile geriatric to performance athlete.

Find out how to help your patients – and your bottom line – by putting the unique advantages of WAVE to work for you. Call, click, email or visit.
